Jake Cushway

306-281-9289 | Victoria, BC | jakecushway96@gmail.com | jakecushway.ca

Education

Bachelor of Science – Computer Science | University of Victoria, BC **Sep 2022 – Dec 2026**

Full Stack Web Application Diploma | Selkirk College, BC **Sep 2021 – May 2022**

Technologies

Languages: React, JavaScript, C, Python, Java, Rust, SQL, HTML, CSS
Technologies: Git, Docker, Linux, Apache2, Nginx

Relevant Work Experience

USV Software Engineer Intern | Open Ocean Robotics Jan 2026 – Present

- Develop, test, and integrate React-based features into DataXplorer to improve autonomous vessel piloting, usability, and data tracking.
- Assist in leading testing and R&D operations for implementing new features, updates, and performance improvements.

AI Quality Assurance & LLM Trainer | DataAnnotation Sep 2026 – Present

- Evaluate and rank AI-generated responses for accuracy, reasoning quality, and instruction following to improve large language model performance.
- Review and debug model-generated code across language such as Python, JavaScript, SWL, writing detailed feedback to guide model training.

Full Stack Developer Intern | Selkirk Innovates May 2023 – May 2024

- Utilized grant funding to offer community members with innovative ideas a working prototype solution.
- Developed and added features to *State of the Basin* and *Basin Climate Source*, strengthening front-end functionality and user-experience.

Freelance Web Development Sep 2023 – Sep 2025

- Collaborate with clients to design, develop and deploy custom websites based on their business needs.
- Develop and host these websites on a private Linux server, providing clients with cost-effective hosting and ongoing maintenance.

Volunteer

UVic Hacks Co-Founder | University of Victoria Hackathon Club 2026 – Present

- Co-founded UVic Hacks and helped organize coding events for 300+ students, supporting technical workshops, sponsorship outreach, and collaborative project based learning.

Projects **github.com/jakecush1**

AI Photobooth | *Python, Convex, React* September 2026

- Raspberry Pi attached to camera with convex database, emulating a traditional photobooth, which accepts payment, prints photos and can apply an AI filter to alter photos.

USV Data Analysing Tools | *JavaScript, Python, HTML* April 2026

- Built a GPS data analysis tool that cleans raw location data and generates distance reports, helping users quickly review trip history.

DataFusion Piloting Feature | *React* Ongoing

- Developing a new feature for users to view past trip data and track illegal fishing activity using the DataXplorer piloting interface.

Mathiné | *Vue.js, Git, Nginx* September 2025

- Developed a centralized organizational tool for students that integrates with the University of Victoria's online learning platform.
- Fixed bugs and improved UX by collecting student feedback and refining app usability.
