Jake Cushway

306-281-9289 | Victoria, BC | jakecushway96@gmail.com | jakecushway.ca

Education

Bachelor of Science – Computer Science | University of Victoria, BC — **Sep 2022 – Dec 2026**

Full Stack Web Application Diploma | Selkirk College, BC — **Sep 2019 – May 2020**

Technologies

Languages: React, JavaScript, C, Python, Java, Rust, SQL, HTML, CSS
Technologies: Git, Docker, Linux, Apache2, Nginx, AI native

Relevant Work Experience

USV Technician Intern | Open Ocean Robotics — Jan 2026 – Present

- Develop, test, and integrate React-based features into DataXplorer to improve autonomous vessel piloting, usability, and data tracking.
- Assist in leading testing and R&D operations for implementing new features, updates, and performance improvements.

AI Quality Assurance & LLM Trainer | DataAnnotation — Sep 2026 – Present

- Evaluate AI-generated responses and debug model-written code (Python, JavaScript, SQL) for accuracy and reasoning quality, writing detailed feedback to guide model training.

Full Stack Developer Intern | Selkirk Innovates — May 2020 – May 2021

- Developed and added features to *State of the Basin* and *Basin Climate Source*, strengthening front-end functionality and user-experience.

Freelance Web Development — Sep 2020 – Sep 2023

- Design, develop, and deploy custom websites for clients, hosted on a private Linux server with ongoing maintenance

Volunteer

UVic Hacks Co-Founder | University of Victoria Hackathon Club — 2026 – Present

- Co-founded UVic Hacks and helped organize coding events for 300+ students, supporting technical workshops, sponsorship outreach, and collaborative project based learning.

Projects **github.com/jakecush1**

AI Photobooth | GitHub | *Python, React, Next.js, Convex, Raspberry Pi*

- Built an AI-powered photobooth integrating a Raspberry Pi camera, real-time Convex database, image-generation API, and web interface to automate photo capture, AI restyling, and printing.
- Developed an integrated workflow supporting payment verification, QR-code photo access, and synchronized communication between physical hardware and cloud services

Virtual City | GitHub | *3js, python, claude-code, Vercel*

- **City Square:** Built a navigable 3D city hub connecting two independently developed web applications, featuring interactive buildings, animated camera transitions, and seamless navigation between experiences.
- **Virtual Music Studio:** Developed an interactive music production environment in Three.js, translating audio signal-processing concepts and Python-based tools into a browser experience using Claude Code to accelerate development.
- **Interactive Tavern:** Created an immersive 3D website for my band, integrating interactive objects, character models, and music playback to provide an engaging alternative to a traditional band website.

DataFusion Piloting Feature | *React*

- Developed a React-based data-fusion interface for DataXplorer, enabling users to view, organize, and export historical trip data to support vessel activity analysis and illegal fishing monitoring.

Mathiné | Website | *Vue.js, Git, Nginx*

- Developed a centralized student productivity application integrating with UVic's Brightspace learning platform to consolidate coursework deadlines, tasks, and scheduling into a single interface.
